

GOP-Box

Keep planning,
installation, and
costs under control

Get more

Flexibility

Wide range of applications

Speed

Minimal installation time

Safety

Tested against standard values

Convincing cabling solutions

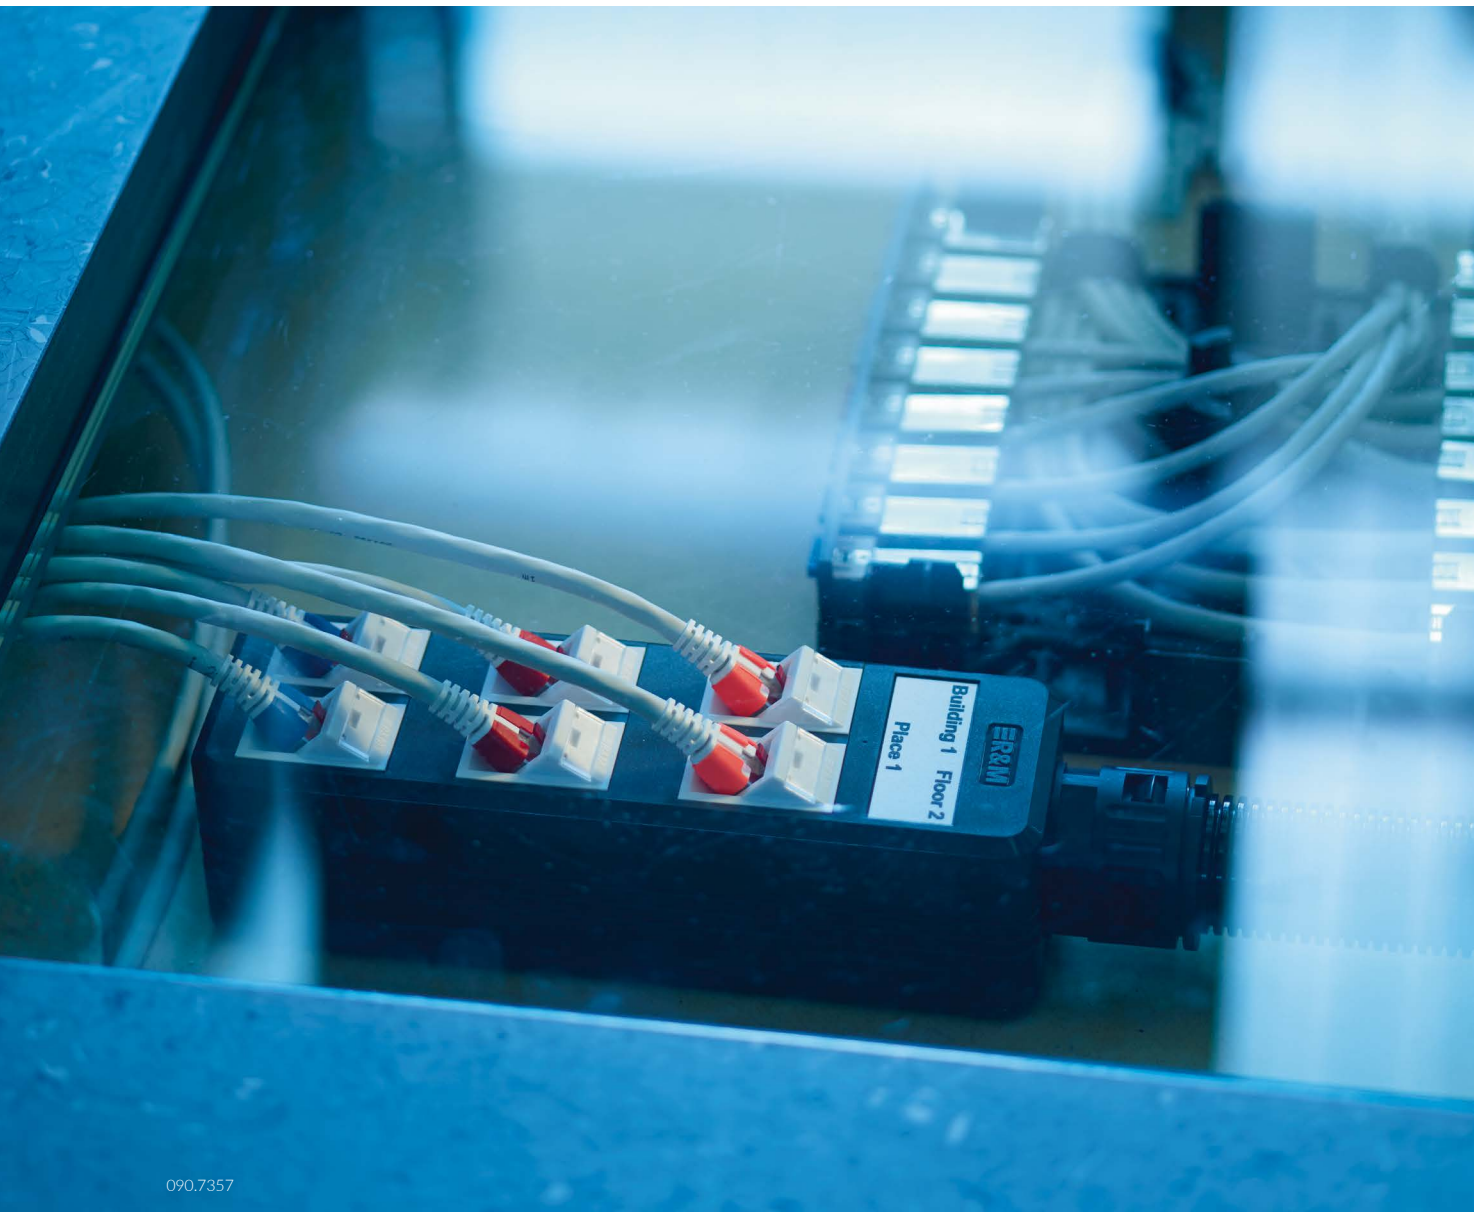

Well thought-out – perfectly designed.

Virtually unlimited range of applications

The GOP-Box was developed to make planners' and installers' jobs easier. The cleverly designed universal box can be used virtually anywhere, whether for connecting workstations, integrating into conference tables, or mounting on the wall or ceiling. The GOP-Box is particularly suitable for use in tight spots, such as in raised floors with very little vertical space.

Time really is money

Nothing is more frustrating for planners than delays to a construction project. All of their meticulous plans are ruined if individual jobs take longer than intended, which can lead to stress, reduced quality in some cases, and ultimately to additional costs.

Installation time reduced to the minimum.

The GOP-Box is designed to allow a large number of jobs to be carried out beforehand, even before the installer reaches the building site.

- The box can be fully equipped in advance
- The pre-equipped boxes have already been tested for compliance with standard values,

obviating the need for a standard value test on site – which saves even more time.

- If necessary, the base plate can be pre-mounted in its intended location; the GOP-Boxes then simply need to be snapped into place
- Accounting is also made quicker and easier as only the material that is actually required is billed

This pre-assembly reduces installation time to an absolute minimum and enables all work steps to be planned precisely and reliably.

Existing installations can also be changed and expanded quickly and easily. The boxes mounted on base plates can simply be snapped out and added to or replaced with a new, ready-prepared GOP-Box.

Quick and easy installation – no matter where you want it.

Installation in raised floors

There is not often a lot of space in raised floors. A simple – and therefore quick and safe – installation process makes the installer's job easier.

The GOP-Box is designed to be snapped onto a pre-mounted and labeled base plate without using any tools. This installation method saves time and improves safety.

Installation on walls or ceilings

In easily accessible locations, the GOP-Box can simply be mounted permanently with four screws, directly onto the wall or ceiling. If access is more difficult or there is not much space, it is better to permanently install a mounting plate and snap on the GOP-Box with the simple click system. This enables modifications to be made quickly and easily.

Functionality meets Design.

Installation on a table

The GOP-Box can also be installed at workstations or in conference rooms. Depending on the table's design and material, it can be fastened directly to the table top. There are two markings for drilling holes on the front of the GOP-Box for this purpose. The box can then simply be screwed onto the table top with two screws. Depending on the situation, the box may need to be installed in a recess – such as in conference tables. No problem for the GOP-Box. Another option is to mount the prefabricated aluminum base plate on a table leg or the table top. The GOP-Box is then snapped into place on the plate without using any tools.

Flexible and versatile

No equipment restrictions

The GOP-Box can be equipped with up to six Cat. 6A EL modules. Multimedia solutions can also be installed on the blind plate.

Screwless assembly

The GOP-Box is designed to be snapped on and off the base plate without using any tools. This is very convenient if there are any changes in the workplace.

Accessories

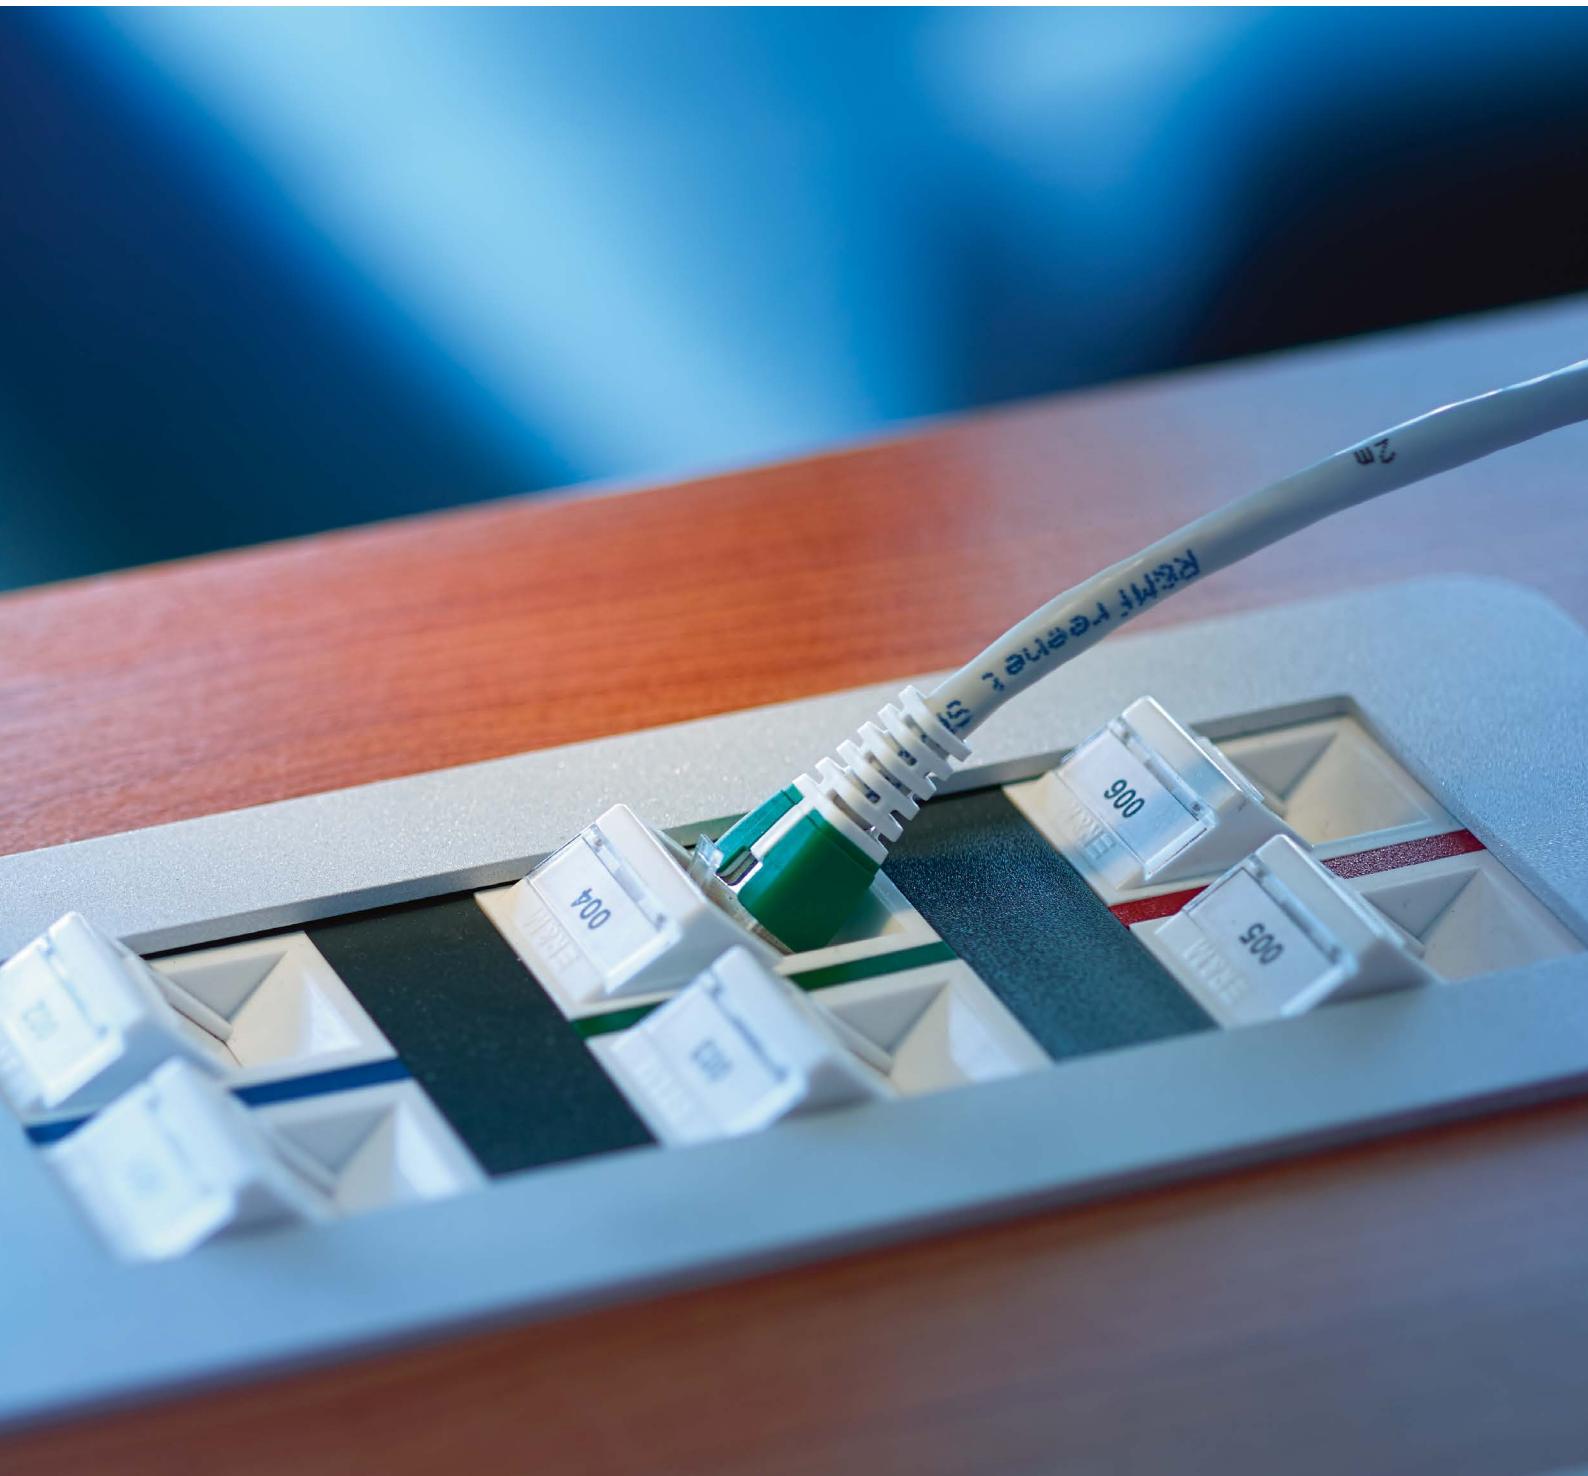

The GOP-Box can be put together to suit the installation location (table, wall, or ceiling). Accessories such as the blind plate (base plate) and colored markings can be purchased as necessary.

Labeling

The spacious areas for markings allow the different services to be labeled clearly and precisely. This makes labeling quick and easy as well as clear and unmistakable.

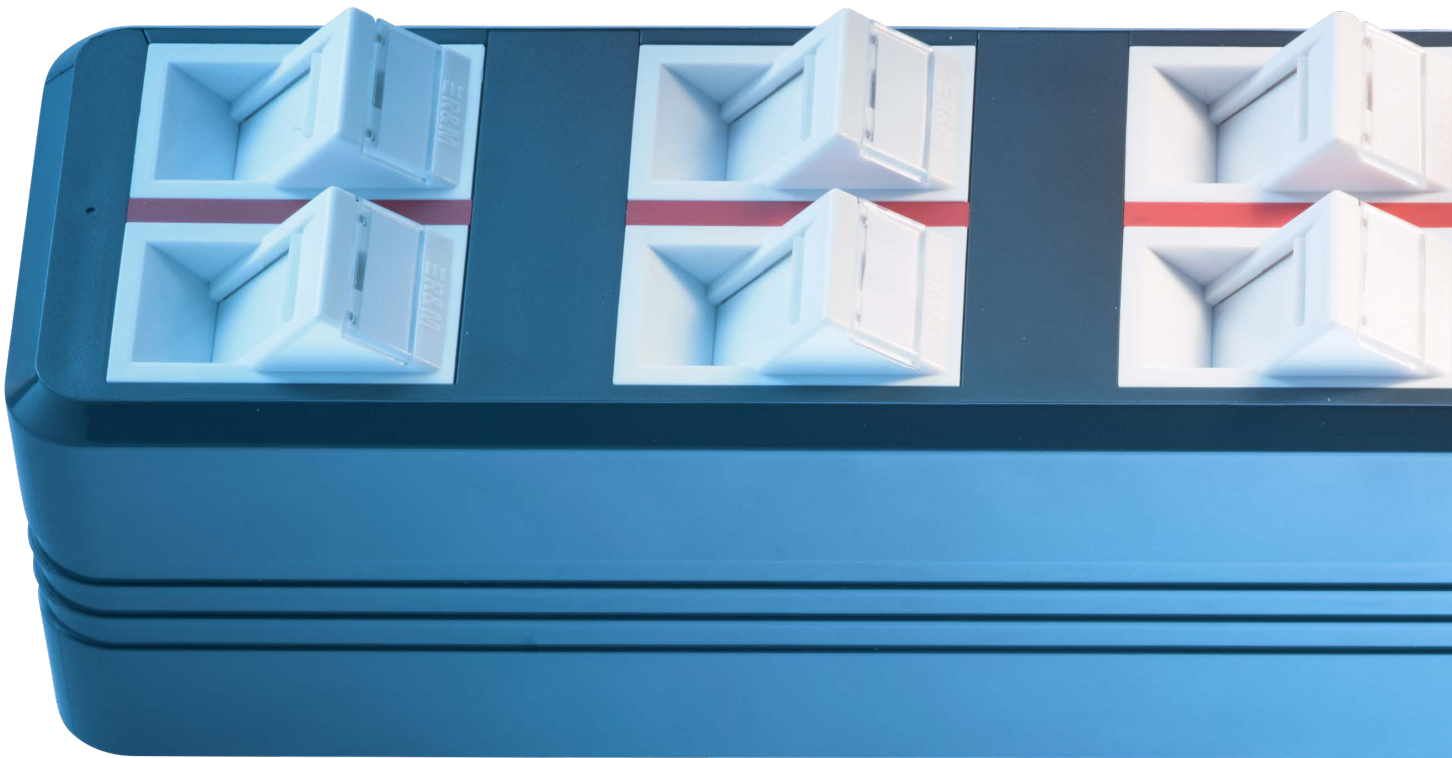

090.7355

Your benefits: at a glance.

- A virtually unlimited range of applications, even in small spaces
- Pre-assembly reduces installation time to a minimum
- Testing the standard values before installation saves time on site
- Thanks to the ingenious click system, reliable plans, changes, and expansions can be implemented quickly, easily, and safely, enabling you to avoid stress, quality issues, and additional costs
- Spacious areas for labels ensure clarity and safety
